THE COVID-19 PANDEMIC IN FRENCH NURSING HOMES

3 OUT OF 4 NURSING HOMES HAD AT LEAST ONE CORONAVIRUS CASE
AMONG THEIR RESIDENTS IN 2020

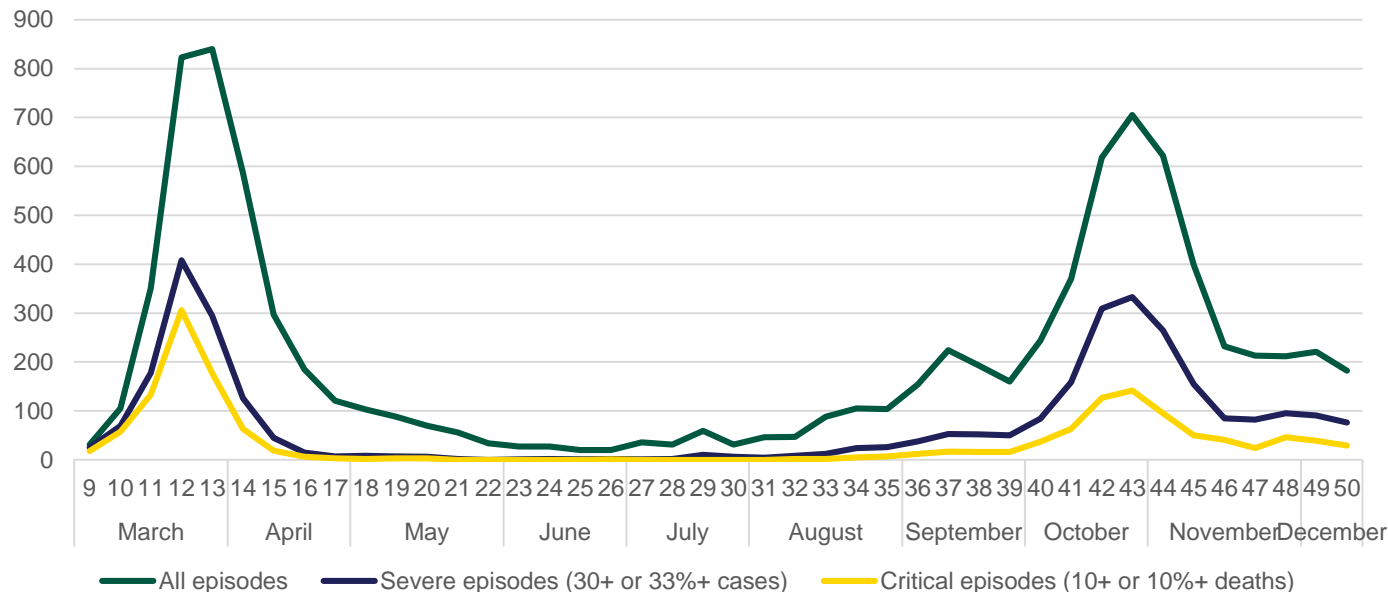

OSOL/Bureau Handicap et Dépendance

The Covid-19 pandemic in French nursing homes

- Specific monitoring survey developed by Sante Publique France for nursing homes from March 30th 2020
 - Survey works by « episode »
 - nursing homes start responding when they have one Covid case
 - daily update of cases and deaths
 - stop at the end of their last active Covid case (among residents or staff)
 - The same facility can experience several episodes
 - Some definitions to qualify the episodes :
 - An unqualified episode corresponds to the presence of at least one resident possible or confirmed Covid-19 case
 - An episode is said to be "severe" when at least a third and / or 30 residents are affected
 - An episode is said to be "critical" when at least 10% and / or 10 residents affected by Covid-19 have died (in the hospital or in the nursing home).
-

The Covid-19 pandemic in French nursing homes

Two waves in 2020

The Covid-19 pandemic in French nursing homes

Two waves in 2020

	First wave	Second wave	Total
Covid cases	80 100 (13%)	144 400 (24%)	224 500 (38%)
Covid deaths	14 700 (2.5%)	14 600 (2.5%)	29 300 (5%)
Infected nursing homes	3 500 (47%)	4 020 (54%)	5 440 (72%)
Twice infected nursing homes	3%	13%	34%
Nursing homes with severe episode	16 %	25%	38%
Nursing homes with critical episode	10 %	10%	20 %

The Covid-19 pandemic in French nursing homes

Difference between territorial affection :

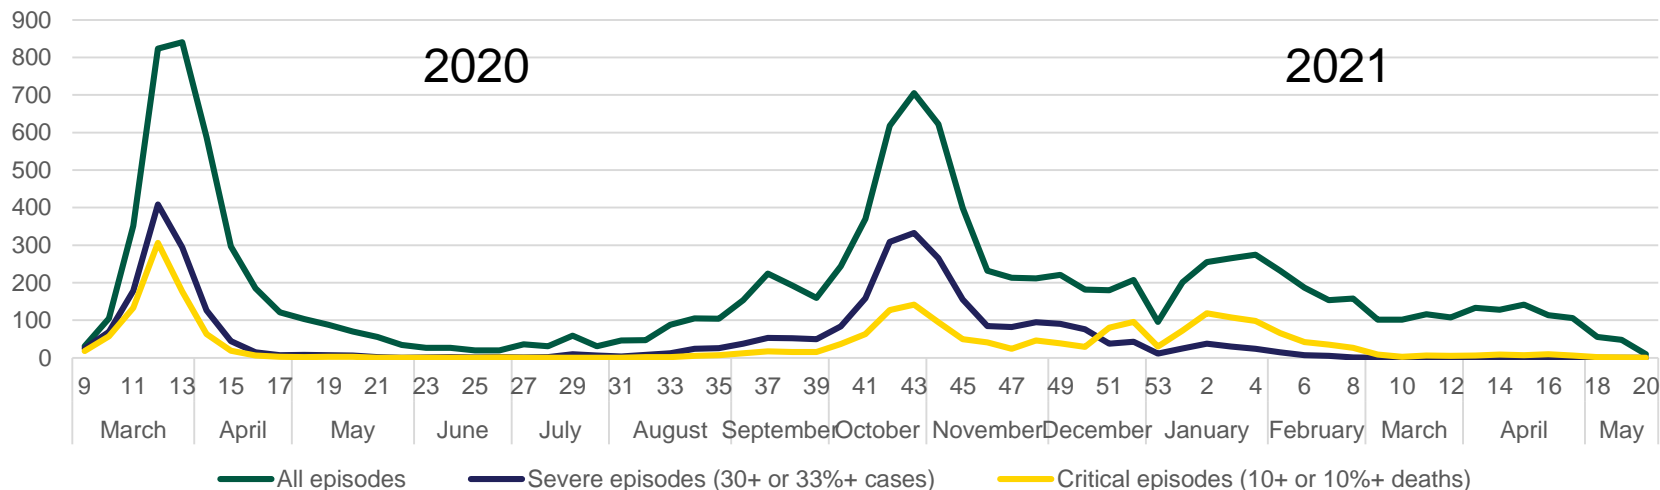

Infected nursing homes : first wave

Infected nursing homes : second wave

The Covid-19 pandemic in French nursing homes

Improvement in 2021 – no third wave in nursing homes

Further work on Covid 19 vaccination effects!
