# Geriatric Rehabilitation (GR) after COVID-19

# Aims

1. To gain insight into recovery of older COVID-19 patients during and after stay at a rehabilitation department
2. To gain insight into the content of post-COVID-19 rehabilitation in various European countries

# Study design

**What?** Multi-center observational cohort study

**Who?** Patients admitted to GR after SARS-COV-2 infection

**Where?** 66 health centers in 10 countries

**When?**

# Outcome measures

## Question #1:

Primary outcome: **ADL functioning**

Secondary outcome: **Quality of life**

## Question #2:

Treatments

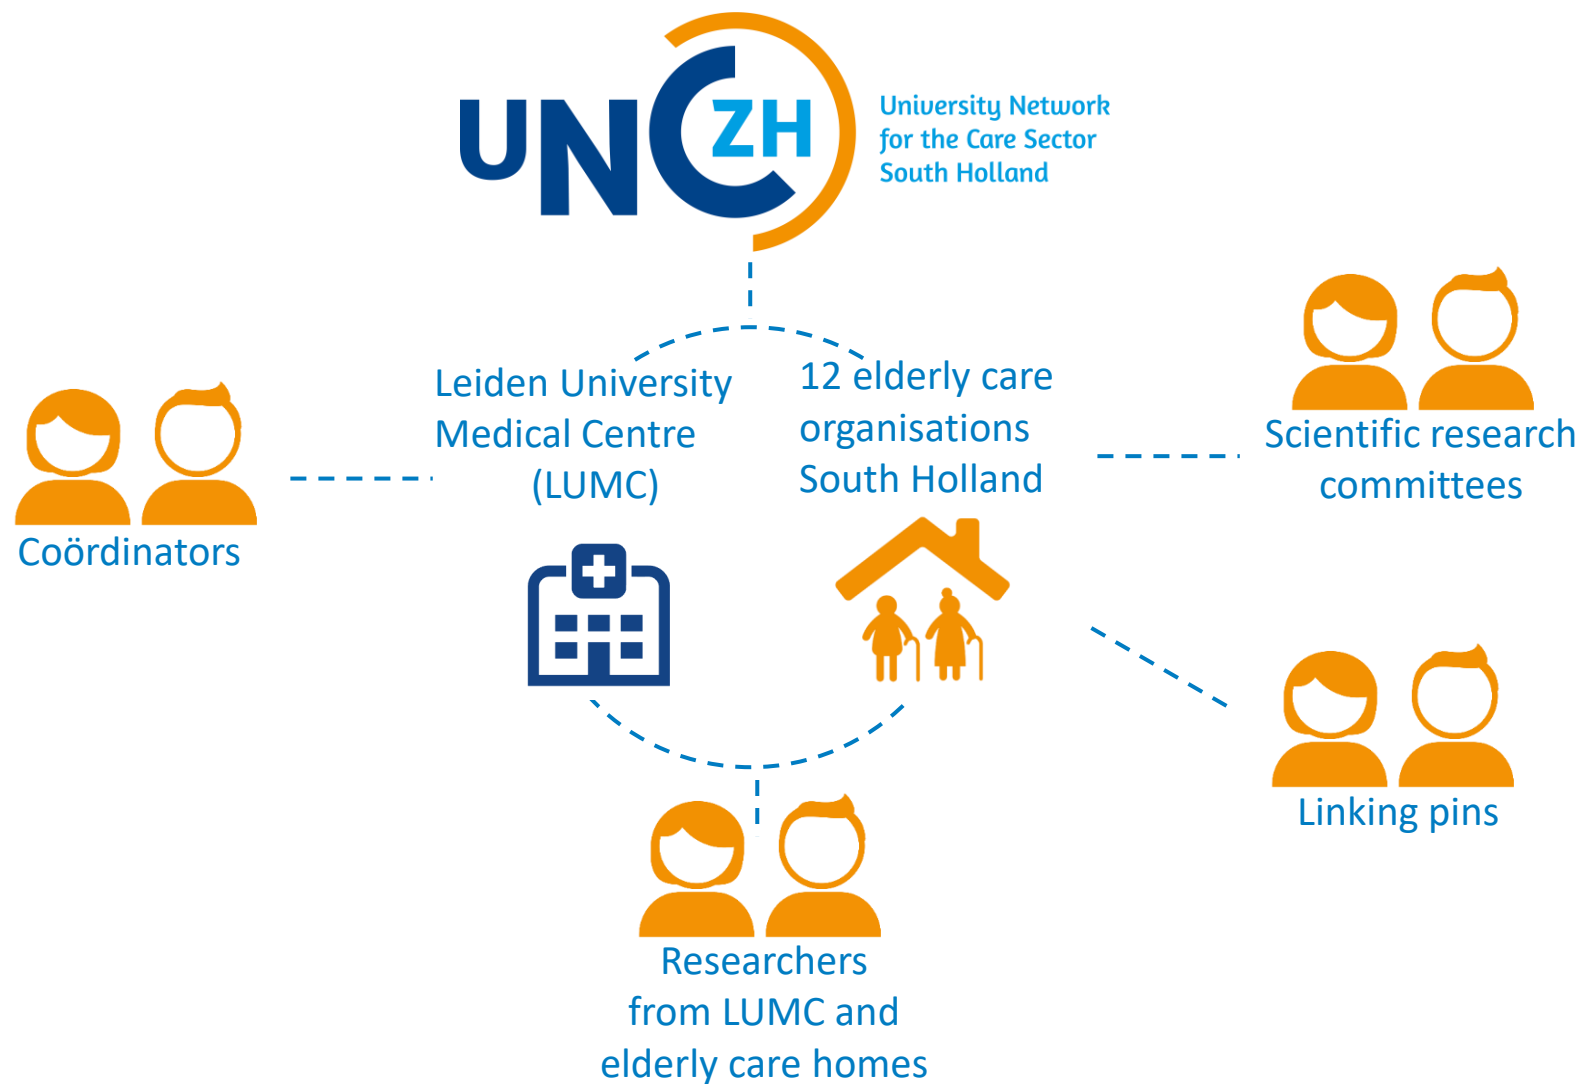

Health care professionals

# Update October 20, 2021 (N=712)

# Research in elderly care homes in the Netherlands

# National coordinator meetings

# Overview of collected data

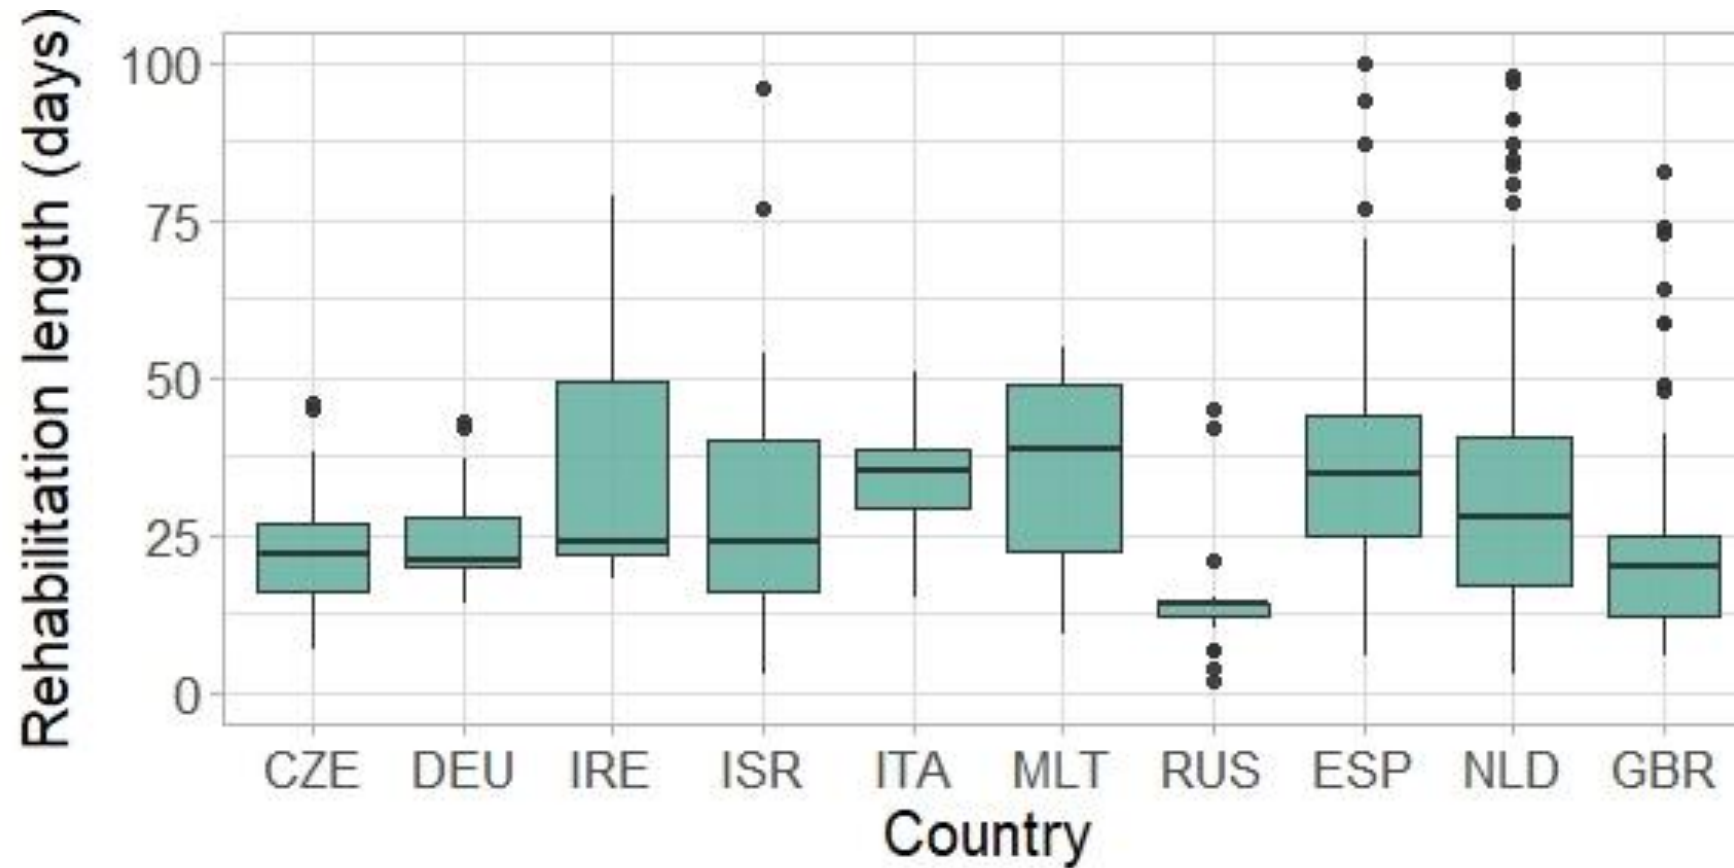

# Post-COVID-19 patients (N=703)

Characteristics	
Age (mean(IQR))	75.5 (69 - 83)
Sex: male	51.8 %
Obesity	24.5 %
Pulmonary disease	31.8 %
Heart failure	32.4 %
Diabetes	33.1 %
Hospital admission	90.3 %
ICU admission	34.8 %
ICU length of stay in days (median(IQR))	24 (12 - 43)
Rehabilitation length in days (median(IQR))	25 (16 - 38)

# Rehabilitation length by country

# Clinical Frailty Scale at GR admission

Very fit to  
managing well:  
**10.2 %**

Vulnerable to  
mildly frail:  
**27.3 %**

Moderately to  
very severely frail:  
**62.5 %**

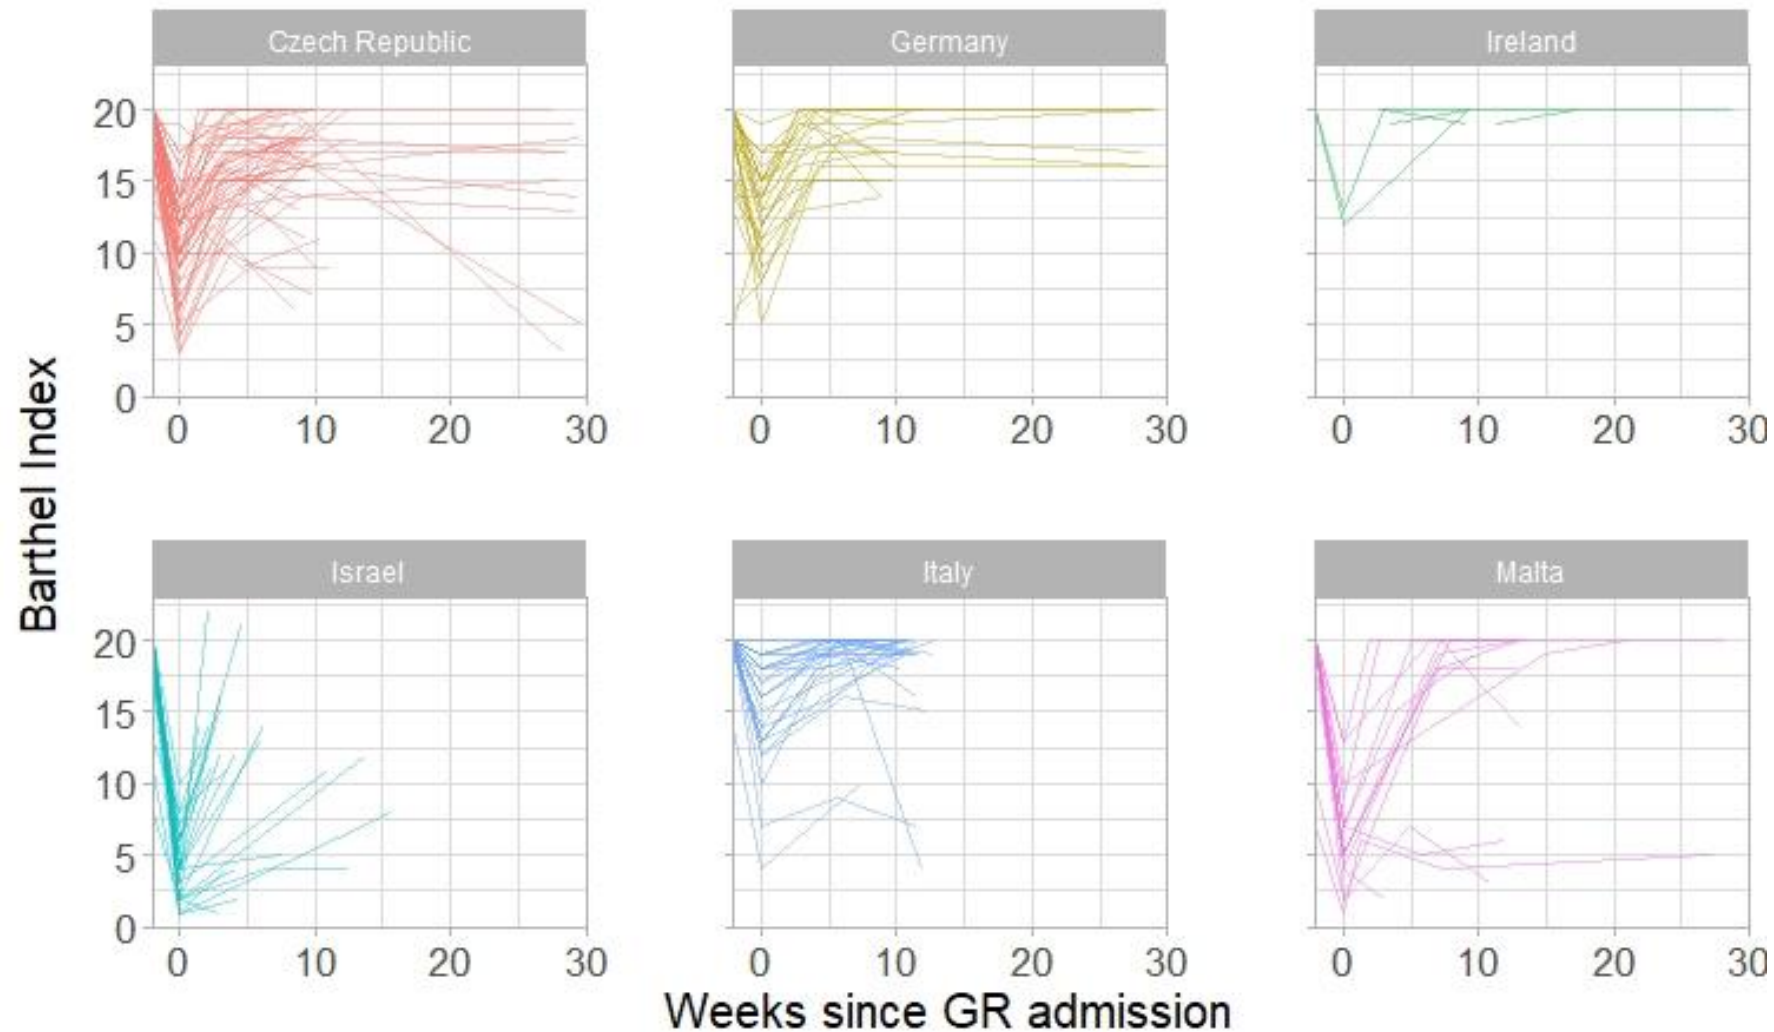

# Preliminary results

	Premorbid	Admission	Discharge	FU 6 weeks	FU 6 months
<b>Barthel Index</b> (range: 0-20)	<b>17.9 (3.7)</b>	<b>11.0 (5.5)</b>	<b>16.1 (4.8)</b>	<b>17.1 (4.6)</b>	<b>16.7 (5.2)</b>
<b>EQ-5D-5L VAS</b> (range: 0-100)	NA	<b>51.0 (19.3)</b>	<b>65.8 (16.0)</b>	<b>67.6 (15.7)</b>	<b>66.9 (16.3)</b>

# Daily functioning

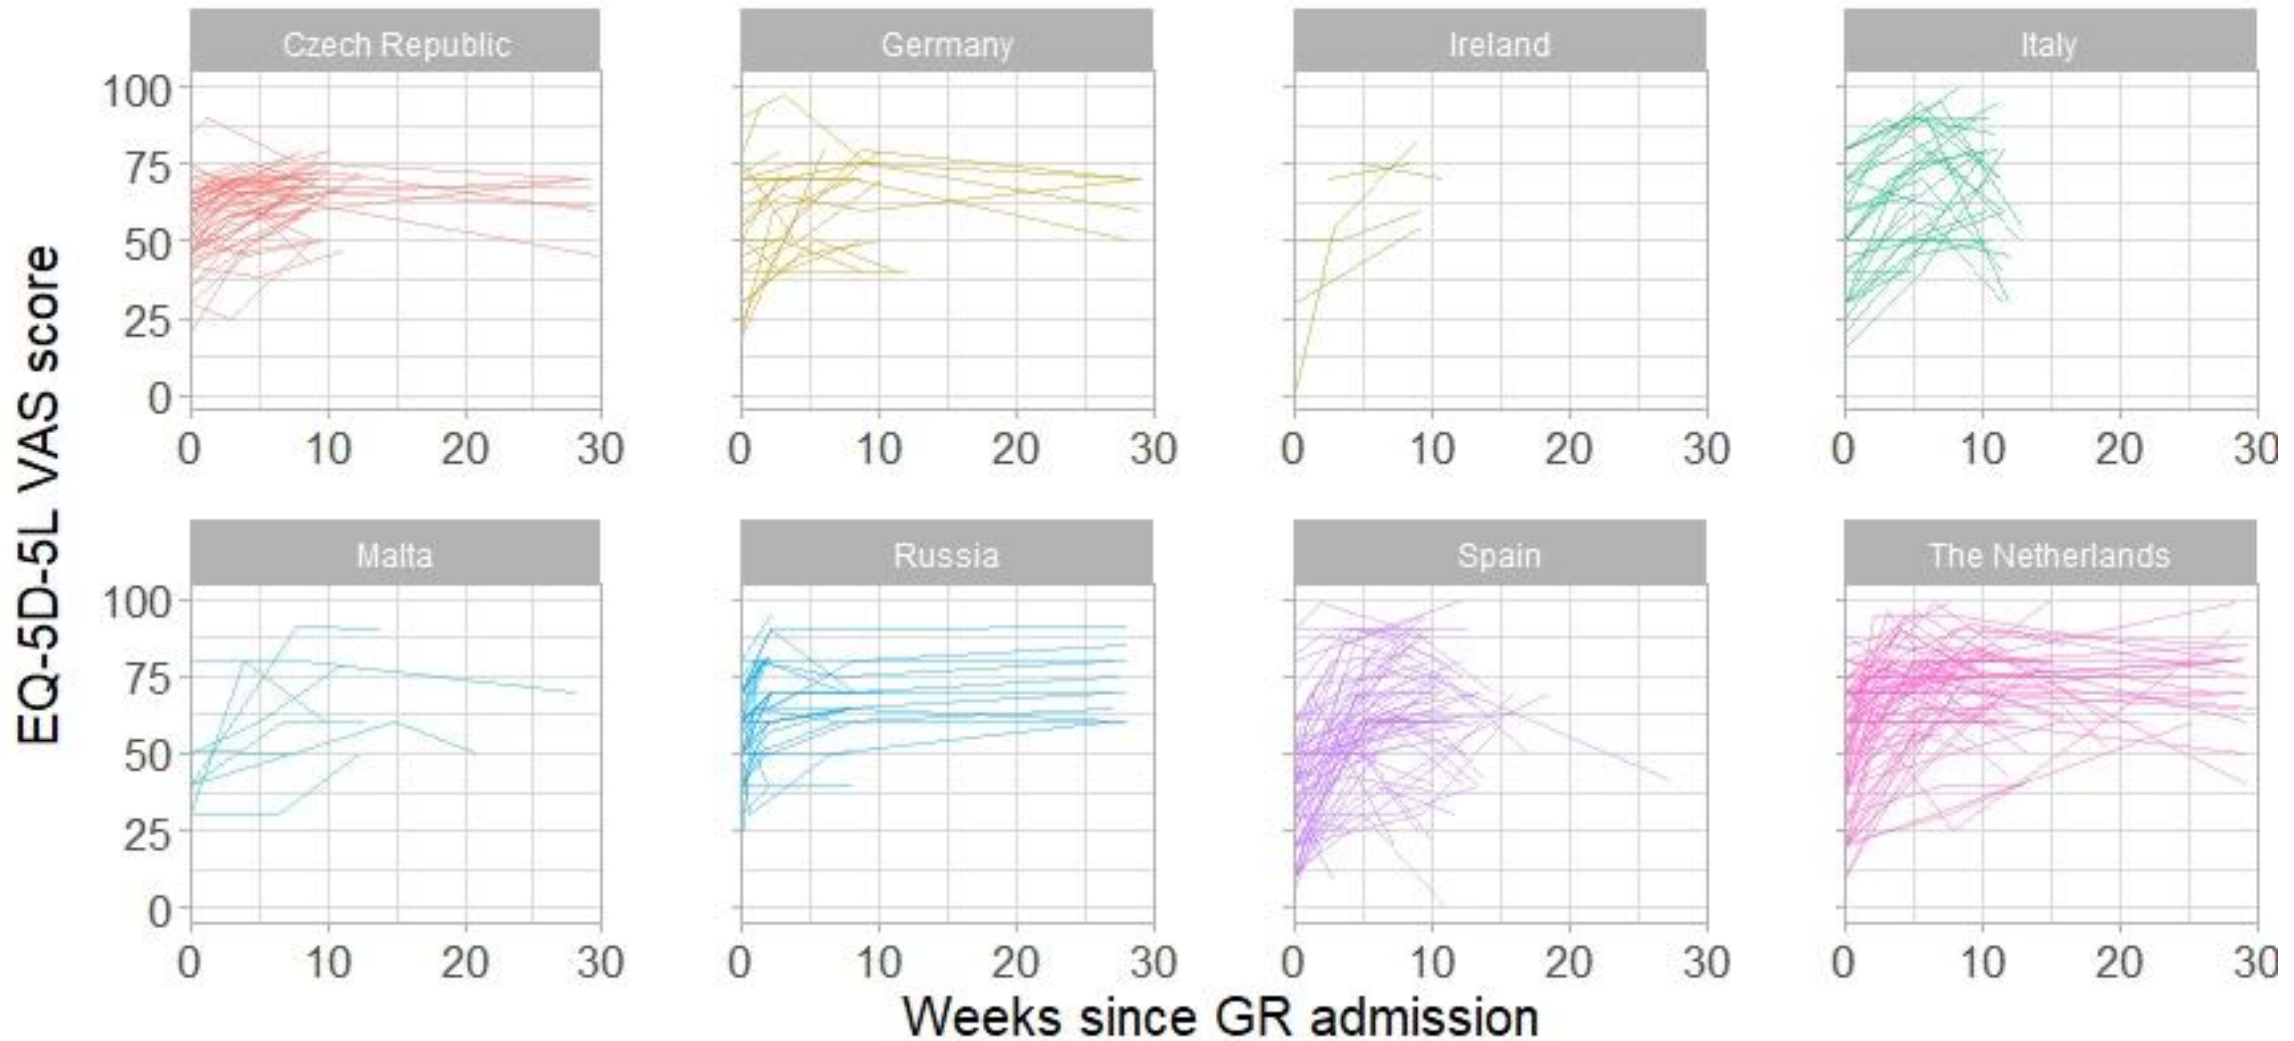

# Daily functioning

# Quality of life

# Return to home

## Premorbid residence

92.5 % 

6.0 % 

## Discharge destination

76.0 % 

15.7 % 

4.1 % 

1.2 % 

# Conclusions

## ADL functioning:

Many patients are almost back at their premorbid level at discharge

## Quality of life

Strongly increased during GR

Substantial recovery is observed during and after GR

## Future steps

- Examine the influence of factors associated with recovery
- Quantify cross-country differences in recovery
- Examine differences in treatment across countries
